BRG (aka Berto: Border Rhythm) plug-in transforms a sequence of blank video and audio tracks into a new, sound-manipulated video sequence. Berto uses one set of video frames as a template, and the .BRG plugin then applies a number of .BRGtracks, or .BRGtile frames, on the .BRG video sequence. The .BRGtile frames are composed of an .BRG drawing with .BRG tile layers and .BRG colors. The .BRG plug-in has been adopted in some art museums around the world, where it is used as an art-supporting technology for educational purposes. History The .BRG plugin was created in 2012 by Berto Keljzer. The .BRG plugin was initially released in Adobe Premiere Pro for Mac and Windows, and later in 2015 it was released as a plugin for the .BRG tiltrampe animation suite. The .BRG plugin is distributed by .BRG ( www.bertocejzer.nl ). Applications. BRG tiltrampe plugins are used in a large number of art museums around the world, including the .BRG Museum in Alkmaar, the .BRG Museum in Utrecht, and the .BRG Museum in Rotterdam. References Category:Animation software Category:Video editing software Category:Adobe softwareQ. Objective-C Type erasure: Casting Given the following sample code: @interface I1 : NSObject { } - (NSString \*)foo:(NSString \*)val; @end @implementation I1 - (NSString \*)foo:(NSString \*)val { return [NSString stringWithFormat:@"%@@ %@",self.foo, val]; In java, this would be: public class Main { public static void main(String[] args) { I1 i = new I1(); i.foo("abc"); System. 82157476af
